We Believe the Mother Cow Matters

www.WhistlingWindsAngus.com

Welcome to our 15th annual sale at a new location, our home. Proudly, we have committed 19 years to the registered Angus business. Here at Whistling Winds Angus, our goal has always been to bring the good ones to you. We strive to keep that focus even through this change of sale location. This year's offering includes very stout made, big topped, deep bodied sons of the popular sire SAV Rainfall, Sitz Stellar, Ellingson Chaps, Shipwheel Resource, and AAR Creed.

Our story began with a small herd of registered cows on shares. A couple of years later, we purchased a trailer load of heifers from Arntzen Angus. We were selling bulls private treaty for the first few years. In 2006, we joined with Kel Mcc Angus, Top Notch Angus, Boyum Angus, and Peterson Grain and Cattle to form Kel Mcc Plus sale. In 2010 Boyum Angus dispersed their cows and the remainder of the group rebranded into Montana's Northern Premier Angus Sale. We sold with this group until last year. When involved with a group sale, the one thing you don't get to do is really emphasize your program's vision for people to appreciate. We strive for a certain style of cow; for cows to wean big calves and breed back on time. We believe you can't talk about a bull without first talking about his dam and grandam. First and foremost, we want cows that are structurally correct. They have to have an eye appealing phenotype. We are very consistent with the type of sires we use. We like easy fleshing, deep bodied cows that are middle of the road frame size. These cows perform best in our harsh environment. True to the name, we get a lot of wind here. Our winters are often extremely cold, and the wind can chill to the bone. Cows with some gut, and cows that hold flesh perform better for us. Our cows must have good feet, and utters; they must have a good disposition while maintaining mothering ability. We do not creep feed. Our weaning weights are a result of selecting the good cows and maintaining the highest standards or be culled.

As we plan for the future, we will offer 50 bulls in our sale. While keeping to our strict standard, this will take a couple of years to achieve. It has been said, 'it takes a lifetime to build a cow herd'; they weren't lying. We want our customers to be confident knowing their purchase is bettering their own herd. Not only from the growth to the feedlot, but also keeping heifer replacements that have structural soundness and longevity bred into them.

The bulls have been fed a high roughage ration to ensure soundness. This balanced ration consists of grass hay and a grower pellet from Hubbard Feeds.

We want to extend a huge thank you to our vet Dr. Casey Solomon. She has made herself an integral asset to our operation. From pregnancy checking, bull testing, horse care, dog care, to handling our embryo work, we sure appreciate all of her efforts. We want to thank Austin Buzonowski and Joe Lewis for their excellent job trimming bulls. Congrats to Austin becoming a father. Thanks to Annie Branger for taking time to picture our bulls. Thanks to our friends and neighbors Rod and Cooper Spicher for preparing the brisket for lunch.

If we can help answer any questions, please do not hesitate to contact us anytime.

David and Katie Sattoriva

Whistling Winds Angus
has finally moved home!

Whistling Winds Angus

Sight Unseen Purchase Guarantee - Buyers unable to attend the sale may call any time. Let us know your bull needs and your budget range. We'll bid on and purchase the best cattle possible for your specifications. We'll let you know of cattle purchased following the sale and make payment arrangements with you. If you aren't satisfied upon delivery, you don't own the bull(s).

Health & Performance - All bulls sell with complete performance test information including scrotal measurements. All bulls have been semen tested by Dr. Casey Solomon, Milk River Genetics. All bulls are tested negative for BVD. They have received Fusoguard, BoviShield Gold FP5 VL5, Multimin, pour-on, and have been BVD tested. Our entire herd has been tested for Johnes Disease for the past 3 years. We will continue to be proactive in eliminating this disease. See page 16 for more information.

Bull Development - The bulls were developed on a high roughage ration at a 3 pound ADG to insure soundness.

Genomic Enhanced EPDs - All of the bulls in the sale offering have had HD50K DNA testing to increase EPD accuracies and predictability. The test is a tool to enhance selection and predict genetic potential. EPDs are current as of 2/19/21. Updated EPDs at www.Angus.org

Retained Interest - Whistling Winds Angus is retaining a 1/3 revenue share interest on all bulls selling in the sale, unless otherwise announced from the block. Natural use and salvage belongs to the buyer. If we choose to collect semen from a bull that you have purchased, we will have it done at your convenience and at our expense.

First Year Breeding Guarantee - (breeding season is defined as the 90 day period following the first turnout of the bulls). Please notify the breeder should an injury occur and prior to the injured bull being sold for salvage. All injured bulls must be diagnosed by a veterinarian. All bulls will be given 50% of the value of the injured bull, minus any salvage value, toward a credit or replacement bull if one is available.

Terms & Conditions - All cattle sell according to the standard terms and conditions of the American Angus Association.

Delivery/Hauling Rebate - Free delivery on the bulls around Montana. If you bring your trailer to the sale, a \$40 rebate will be returned to you after sale settlement for bulls you haul home on sale day.

Liability - All persons attending this sale do so at their own risk, legal or otherwise for their safety or the behavior of the animals. The owners, auction service and sale staff assume no liability for property loss or any accidents that may occur.

Announcements - Announcements from the block will take precedence over the catalog.

Accommodations -

Powerful Resource son whose low birth weight yet high performance progeny record distances him from the pack. Built like a tank - wide topped, displaying extra muscle shape throughout. His daughters are big bodied, beautiful uddered female with exceptional foot quality. CHAPS offers all of the quality of Resource with significant advantages for both Direct and Maternal Calving Ease as well as Marbling.

American Angus Association Selection Tools

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

His pathfinder dam 2290 is a been-there-done that type of cow. She is a super deep broody made cow that stands on excellent feet. She has raised multiple herd bulls. The most current is WW Hi Line who was the \$13000 top seller in last years sale to Zach and Cassie Lewis. Good cow bull packed full of growth. This bulls sire, Shipwheel Resource 6503, was our selection in Shipwheel's 2017 sale. He had an excellent disposition, thick made, modest framed, excellent feet. He is leaving us with a heck of a set of daughters.

Another excellent cow bull bred for structure and longevity. Our Shipwheel Resource 6503 daughters are outstanding. 6503 definitely did a good job of consistently stamping his offspring. We look for that when we use a bull really heavy.

Heifer bull. He is a bull I like more every day. Ranks in the top 3% \$M. Good cow family. His dam 5160 produced a herd bull that is doing a fantastic job for GDAR. She has consistently bred AI and has multiple bulls out in the country proudly working. Great grandam raised WW Definitive who sold to ABS, and produced lots of good daughters still out doing their job.

Heifer bull backed by generations of heifer bulls. We lost his Dam last calving season when she went down on some ice and didn't get up again. She has done an outstanding job for us. Granddam was a donor for Boyum Angus. We have a daughter of his dam as a donor for us currently. She is 10 years old and is the dam of lots 16 and 17. We calved a full sister to this bull this year, and she is a very nice young cow. Looks like she is going to carry her dams excellent feet.

He is a very thick, soggy made bull. Dam's average birth weight on 7 calves is 81lbs. He should work on most heifers. Creed 7808 was our selection out of Arntzens 2018 sale. We felt the combination of the highly maternal bull, Conneally Thunder, and the great AAR Ankonian cow family would offer some great benefits to our herd.

Heifer bull. If you like moderate framed cows, here is your bull. I really like his dam. She is a 1200 lb cow that has great feet and a good udder. She breeds AI every year and has a Payweight son working for Giem Angus.

ABOVE AVERAGE GOALS REQUIRE TARGETED BULLS

Aim High

The Targeting the Brand™ logo highlights registered Angus bulls with greater genetic potential to produce calves that meet the most challenging specifications of the *Certified Angus Beef®* brand.

Only 1 in 4 non-parent Angus bulls qualify.

Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Dollar Grid Carcass Index (\$G)	+55.0

For more information on Targeting the Brand™ visit CABcattle.com.

WHY WE TEST WITH HD50K™ FROM ZOETIS

Powered by HD50K™ from Zoetis, our cattle sell with genomic-enhanced expected progeny differences (GE-EPDs).

With GE-EPDs, we're confident that customers like you can minimize risk in their investment — and enhance the productivity of your cattle.

The benefits of buying HD50K-tested bulls and heifers goes beyond added accuracy for the complete range of traits for more productive daughters and progeny. You'll know early on what that animal is likely to transmit to its offspring and potential for performance in the feedlot and on the rail. You can also match the HD50K tested sires you buy from us to replacement heifers — through GeneMax® Advantage™ — to make better-informed breeding and management decisions down the road.

Knowing an animal's potential. Continuous progress of your herd. That's why we test with HD50K.

Johne's Control Program

This disease is not new, but is becoming ever more present since I graduated in 2012. Animals infected by the slow growing Johne's bacteria (*M. avium* subsp. *Paratuberculosis* - MAP), intermittently shed the bacterium in their stool and colostrum or milk. Infected animals become clinically ill in their maturity. The Montana Department of Livestock has developed a certification program for producers who are actively screening their entire herd for the disease, Whistling Winds Angus is enrolled in this program.

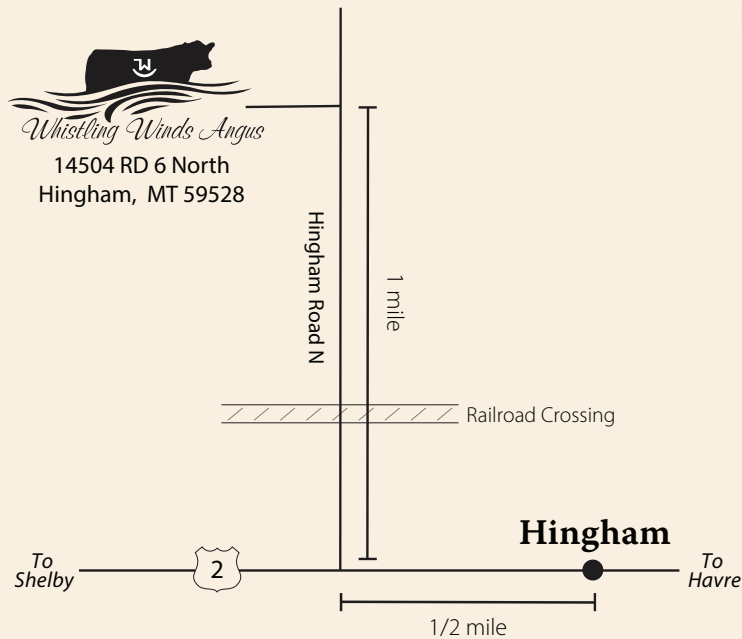

- The bottom line is, this disease is a "corker" for many reasons.
- We cannot accurately determine if calves less than a year are infected.
 - To accurately test a herd, all animals over a year of age have to be tested.
 - The slow growing and intermittent shedding nature of the bacterium makes accurate testing more challenging.

The State Certification Program has established guidelines to cut through the confusion and give producers options to manage or eradicate the disease within their herds. I am an accredited Veterinarian and have participated in the Johne's training provided by the state. Whistling Winds Angus has worked with me to certify a herd plan for management, biosecurity, and testing that has been approved by the Montana Department of Livestock. Whistling Winds Angus tests all cattle over a year of age, annually, and they have a zero tolerance policy for Johne's disease in their herd.
